SCMD-Series of Slim Input and Output Modules are a perfect I/O solution. They provide the inter-changeability of working with the largest installed base of optically-isolated I/O modules complete with hold-down screw as well as allowing the user to save up to 30% of expensive panel space.

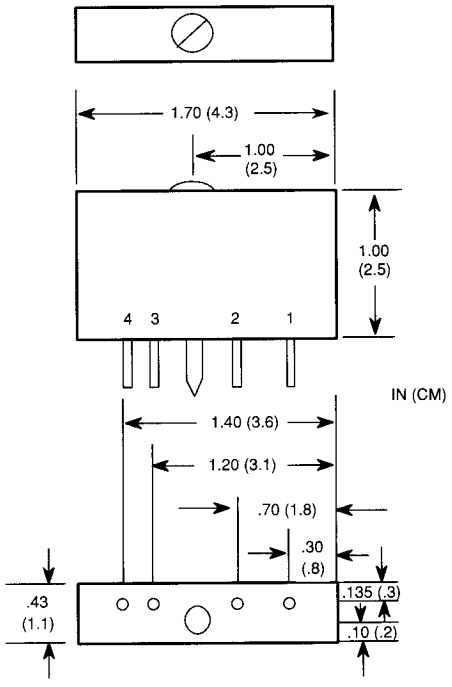

The slim design has the same relationship between the pins and the screws as the de facto industry standard 0.6" style I/O modules. The slim size not only provides the space saving feature, but actually improves reliability by providing improved thermal management of the heat-producing devices internal to the circuit.

All modules are UL recognized, CSA certified and CE compliant.
